## SPECIFICATION FOR

### ACID – BASED CLEANER FOR BRICKS, BLOCKS AND CONCRETE

# BRICKCLEANER \*

#### REQUIREMENT:

Easy cleaning & removal of mortar stains and dirt from masonry walls, floors, tools etc, without affecting the surfaces being cleaned. Formulated from a blend of acids, **Cementaid BRICKCLEANER** will also remove grease and soap deposits from tiles in showers and bathrooms. Can also be used for light acid etch of concrete floors, prior to application of surface coatings.

#### PRODUCT TO USE:

### Cementaid BRICKCLEANER

#### HOW TO SPECIFY:

Remove excess mortar, dirt & grease with scraper or stiff brush to save time & material. All areas shall be pre-wetted with water and cleaned using **Cementaid BRICKCLEANER** diluted with clean water in the ratio 4 parts water:1 part Brickcleaner, applied copiously and worked well into surface by the use of a scrubbing brush, broom or wire brush to facilitate removal of heavy soiling. Leave for up to 3 minutes then wash off with plenty of clean cold water.

#### EFFECTS:

**BRICKCLEANER** reacts with the cement particles, or with the dirt/brick interface, to dissolve the soiling and facilitate it's removal using high pressure water. May be diluted as above for normal use, or used "neat" if required for heavy soiling.

#### WHERE RECOMMENDED:

**BRICKCLEANER** can be applied to most Brick, Block or Concrete surfaces that have been soiled. It is recommended to apply a test area first as the density of the surface can produce different results.

#### PACKAGING:

205 Litre, 20 Litre, 5 Litre, 1 Litre

#### CAUTION:

**Cementaid BRICKCLEANER** is a corrosive product. Wear protective gloves / goggles / clothing, etc. Refer to Material Safety Data Sheet (MSDS) for safety, protection, cleaning and washing instructions.

#### NOTE:

Do not leave **Brickcleaner** in contact with the surface for more than 3 minutes, before hosing off with clean water in order to ensure that only the contaminants are removed and not the surface itself. Application to a small trial area is recommended to determine optimum period before hosing-off. Collect any run-off & neutralise using alkali prior to disposal.
